

LUKE KIMBALL

Applied AI Engineer | Agentic Internal Tools · LLM Infrastructure · Support & GTM Automation

559-789-7214 · kimballluke@gmail.com · Provo, UT — Remote (US) · LinkedIn · GitHub · Portfolio

PROFILE

Operator-builder who builds internal agentic tooling instead of buying SaaS. Daily OpenRouter user; chooses tools that preserve model choice, routing, and cost control. Shipped a production AI voice platform and designed tenant-aware agent infrastructure with security, evals, and reliability built in. Support/GTM fluency from sales, ticketing, CRM, and ops work.

CORE CAPABILITIES

- **Agentic Workflows** Production-deployed AI voice agent (Retell) on Stratum; designed a tenant-aware agent harness on Pace; forked & extended Agent Zero ("Khan") with plugins, a Perplexity research harness, and a multi-agent board.
- **Agent Harness Breadth** Hands-on across 6+ harnesses — Claude Code, Cursor, Cline, Agent Zero, Hermes, Gemini CLI; extended Agent Zero into Khan and designed Pace's agentrun scaffold. Configures Hermes agent workflows for personal automation and repo operations.
- **LLM Infrastructure & Routing** OpenRouter as primary model router — cost-aware selection across Claude / Gemini / DeepSeek families with model aliases; self-hosts open-weight LLMs on bare metal.
- **Cost-Aware AI Optimization** Optimizes frontier, small, local, and routed models for cost/quality; routes each task to the cheapest capable model and uses Perplexity Computer to map repos so lower-cost sub-agents get full context.
- **Build-Over-Buy Internal Tools** Deployed Snipe-IT, RustDesk, osTicket for a 200-person org; built internal dashboards and Python automations rather than buying off-the-shelf.
- **Security & Blast Radius** HMAC webhook auth, RLS tenant isolation, outbound allowlists (SSRF prevention), approval gates, credential management (1Password, Vaultwarden).
- **Evals & Reliability** 334+ automated tests, Sentry + structlog observability, Tableau analytics; 19-container Docker Swarm, incident runbooks, fail-closed guards.

SELECTED AI & INTERNAL TOOLS PROJECTS

Stratum Engine stratumhq.app · github.com/duketopceo/stratum-engine

- Production-deployed AI operations platform for home-service contractors — 24/7 Retell voice agent handles missed-call recovery, follow-ups, and review requests.
- FastAPI + SQLAlchemy backend, Supabase Postgres (17 tables), React/Vite SPA, deployed on Fly.io; Stripe integration, Supabase Auth (Google OAuth).
- Observability hardening: Sentry (profiling, PII filtering, request tracing, HTTP breadcrumbs, worker capture) + structured JSON logging; 334+ test suite; 48+ API routes.

Pace Server (Pace HQ) pacehq.io · *Private business cloud for SMBs*

- Designed a tenant-aware agent harness: 8-step agentrun pipeline, TierGate autonomy tiers (1–5), tool registry, audit trail, approval gates, outbound allowlist (SSRF prevention); model routing via OpenRouter.
- Multi-tenant RLS isolation, Redis Streams event bus, Stripe metering, Stytc B2B SSO. Platform services are live; agent execution scaffold is being wired to first real tool execution.

Khan — Agent Zero fork · github.com/duketopceo/Khan

- Private fork of Agent Zero rebuilt for first-class plugins, secret-first operations, a Perplexity-powered research harness, and Hermes-style memory/skills.
- Multi-agent board (cursor, grok, droid, hermes) coordinated through a live presence board — extended Agent Zero into a workflow-specific private harness.

Open Military Hardware Database (OMHDB) omhdb.luke-the-duke.com · *Open source, production-stable (v2.5), Docker-deployed.*

EXPERIENCE

IT Operations & Infrastructure Lead — Bartlett Roofing

2025 – Present · UT / ID / WY

- Built and maintain a 19-container Docker Swarm across bare-metal Linux servers — production services, monitoring, and self-hosted tooling.
- Deployed Snipe-IT (asset tracking), RustDesk (remote access), and osTicket (helpdesk) for a ~200-person org across 3 states.
- Built an internal TypeScript/Next.js dashboard that cut manual follow-up workload, and automated weekly reporting in Python.
- Configured 1Password and Vaultwarden for enterprise credential security; promoted to lead ops within 4 months; 200+ active projects.

Data Intern / Manufacturing IT Liaison — LiveView Technologies

2024 – 2025 · UT

- Cross-team liaison coordinating between engineering and production teams; automated data-pipeline fixes in Python.
- Built Tableau dashboards for production analytics — defect rates, throughput, and cycle times.

Inside Sales Representative & Trainer — Vivint Smart Home

2020 – 2024 · UT

- Trained 30+ new hires; delivered recurring training to new-hire classes — direct, hands-on GTM and sales-ops fluency.
- Power-ranked top 6 in department for 4 consecutive months on commission-heavy, no-base comp.

EDUCATION

Certificate, Data Analytics — MTECH Vocational

2024 – 2025

Computer Engineering & Economics — BYU-Idaho

3 semesters
